User space app for
browsing

Kernel module
or
VFS modification

- TagFS: Bringing Semantic Metadata to the Filesystem
 - <http://www.eswc2006.org/poster-papers/FP31-Schenk.pdf>
- Nepomuk
 - <http://nepomuk.semanticdesktop.org/xwiki/bin/view/Main1/Deliverables>
- Keywords: metadata, database

- Studied related work
- Stated expected behaviour
 - Add, remove tags
 - Find files based on tags
- Identified pros and cons for the two possible solutions

- Linux 2.6.35
- GCC 4.4.5:
- FUSE Filesystem in USErspace
 - implement fully functional filesystem in a userspace program
 - piece of code that communicates with the kernel as a filesystem would
 - runs on Linux kernels 2.4.X and 2.6.X
 - libfuse - <http://fuse.sourceforge.net/>
- C programming language

- Determine if VFS implementation is feasible
- Data organization
- Search methods
- Start coding

Thank you!

- Filesystem
