# Introduction

User space app for  
browsing

Kernel module  
or  
VFS modification

- TagFS: Bringing Semantic Metadata to the Filesystem
  - <http://www.eswc2006.org/poster-papers/FP31-Schenk.pdf>
- Nepomuk
  - <http://nepomuk.semanticdesktop.org/xwiki/bin/view/Main1/Deliverables>
- Keywords: metadata, database

- Ubuntu 10.10 (Maverick Meerkat) 2.6.35 kernel
- GCC 4.4.5
- Eclipse IDE
- FUSE libfuse
- Programming language C

- Ubuntu 10.10:
  - freeware source code is free for all and can be modified to suite demands
  - latest kernel version - 2.6.35
  - stable workspace
- GCC 4.4.5:
  - latest C compiler
  - freeware
- Eclipse IDE

- FUSE Filesystem in USErspace
  - implement fully functional filesystem in a userspace program
  - piece of code that communicates with the kernel as a filesystem would
  - runs on Linux kernels 2.4.X and 2.6.X
  - libfuse - <http://fuse.sourceforge.net/>
- C programming language

- Determine if VFS implementation is feasible
- Data organization
- Start coding
